(54) Title: **PARTITION SELECTION FOR UNIVERSAL STORAGE DEVICE**

(57) Abstract: The present invention relates to a drive device and method of reading from or writing to a record carrier (10), wherein a predetermined portion of the maximum storage capacity of said record carrier (10) is exposed via an access interface function of a drive device (30). At least one of a size and a location of the predetermined portion is selectable by an input function at the interface function. Thereby, legacy host devices which cannot use the full storage capacity of advanced drive devices (30) can take full or better advantage of the total storage capacity.
